

**"Baseus" Digital Cable USB-C Type, 66 W, 1 m**

Generuota 2026-04-10

**Name**

**Description**

**More**

The product uses 66 W of power and can charge a Huawei Mate 30 up to 70% in around 30 minutes and a Xiaomi Mi 10 up to 60% in the same time. The product is widely compatible and fits most Xiaomi, Huawei and Samsung models. The cord has a small but clear display that shows its power in real time. Monitor it at your leisure and enjoy constant access to useful but reliable information. Above all, the practical and well-thought-out design ensures stable charging. It consists of 5 tin-plated copper filaments for even better conductivity and much lower resistance. In addition, the connector is designed to fit properly into any port, even with an additional case. This makes charging even safer but more reliable. The cord, made of high-quality plastic, ensures long-lasting comfort. The parts prone to breakage are optimally protected against any damage. The zinc alloy connectors are resistant to oxidation, wear and tear and overheating. The nylon braid protects the cable from bending or stretching and gives it exceptional strength and flexibility.
