BAR OF BEAUTY vacuum blackhead removal machine with water jet

More

The innovative BAR OF BEAUTY vacuum blackhead removal machine has not only good adhesion and suction power, but also a moisturizing effect. The water that appears during suction moisturizes the skin, preventing it from drying out throughout the procedure and leaving it looking even more radiant and smooth after the procedure. The use of this device not only results in a clean and glowing skin, but also a reduction in wrinkles, as the device has suction and stretching properties that can remove small facial wrinkles, making the face look younger. To make sure that the device is really effective, it has a built-in transparent water tank that allows you to see all the cleaned dirt. The container can be removed and cleaned very easily.

FUNCTIONS

6 Interchangeable Suction Heads: Different suction heads for different facial skin conditions. Small suction heads are suitable for cleaning small areas such as the nose area. Medium suction heads are suitable for around the eyes, nose, and large suction heads for the forehead and face. It is recommended to start with a low suction power and a small head. **Visible Water Reservoir:** The Cleansing Reservoir is responsible for deep pore cleansing. Pore dirt enters the cleaning tank with the suction of the machine, so you can see how the cleaning process is going and how well it is done. **Effective Pore Cleansing Machine:** Using innovative vacuum adsorption technology, the blackhead pump can easily suck out blackheads and deeply clean pores without harming the skin. Small bubbles enter the pores to cleanse and moisturize the skin without irritating it. **3-level adjustable suction:** You can easily set the most suitable suction power for different areas and skin types. From high to low suction power. Suitable for oily, normal and dry skin. **Easy to use:** Before using this vacuum machine, put a warm towel or hot steamer on your face to open the pores. Then choose the right tip and mode according to your skin type. During the procedure, it is not recommended to keep the vacuum device in the same place of the face for a long time.

More information

Use twice a week. After the face is clean, smear the nose with a blackhead remover with a cotton pad and keep it for 3-5 minutes, you can use a hot air steam spray to fully open the pores. If there is no such possibility, a warm cotton pad will also work perfectly, and after holding it for a couple of minutes, the pores will open. Then you can already select the required head. After pressing the power button, hold it longer to turn on the device. Do not hold in the same place for more than 3 seconds. If necessary, the mode can be changed.
